

## LABOMED

PRIMA
At LABOMED, harmony in all our concepts has always been the guiding principle when designing new products. Staying true to this philosophy, we proudly introduce a new dimension in performance,
flexibility and economy in
diagnostics and surgery - the PRIMA series. Each microscope is built to perform under the most demanding of clinical and hospital environments. The PRIMA series offers an array of configurations to address all needs in ENT, dental, gynecology and ophthalmology.

PRIMA microscope systems offer a brand new dimension in performance, flexibility and economy in diagnostics and surgery. PRIMA packs a high level of performance in its small package. Its compact design is tailored to optimize use of limited operating room space. From outpatient clinics to sugeries, PRIMA offers flexibility and performance to serve every clinical requirement in the field of ENT, dental, gynecology and ophthalmology.

Combining superb optical performance with modern style and ergonomics, PRIMA is a task master for your microscopy needs in diagnostics and surgery. PRIMA is a multi-talented system that can be easily configured for use where patients are to be supine or seated in an examination chair. Regions of interest come into sharp focus through our meticulously designed apochromatic optical system. Preconfigured systems can be further customized or extended with a host of accessories to suit your individual needs.

The PRIMA series is one of the first in diagnostic microscopy to introduce a suite of products equipped with an integrated LED (light emitting diode) illumination system capable of providing a measure of light intensity that is both bright and cool enough to address a host of diverse applications. This is made possible through innovation in illumination design.

PRIMA incorporates a highly efficient 50W LED coupled with a patented optical design and a 6 mm fiber-optic cable that come together to deliver a cool light with lumens equivalent to a 150 W halogen bulb. The LED switches off automatically when the suspension arm is moved to its top-most, or park position.
A rotary potentiometer control is conveniently located above the observation head to provide smooth, flicker-free variation in illumination intensity.

No matter how simple or complex the application, each PRIMA configuration excels in offering the greatest value to physicians and specialists alike. With a range of high-performance motorized as well as ergonomic accessories that are built to last, your PRIMA operating microscope can be enhanced to meet all of your desires as well as your budget.
PRIMA OPH configured with XYZ motorized movement operated through a comfortable foot control, a very effective red-reflex co-axial illumination and a 150W halogen light source makes it ideal for cataract and retinal surgeries.
With a powerful selection of digital and analog cameras available for the PRIMA series, documenting your observations, archiving records, and sharing information with colleagues never felt so simple.

With the use of table, wall, and ceiling mounts, our line-up of microscopes can be adapted to a plafform that best fits your functional space requirements. And our line doesn't stop at what you see here. LABOMED carries a diverse set of tools to further compliment your medical diagnostic imaging needs.

5 -step, apochromatic magnification changer
Magnification factors $0.4 x, 0.6 x, 1.0 x, 1.6 x 2.5 x$. Object field size range from 7 mm to $118 \mathrm{~mm}^{*}$
Wide field eyepieces $10 \mathrm{x} / 16 \mathrm{~mm}, 12.5 \mathrm{~mm} / 16 \mathrm{~mm}, 16 \mathrm{x} / 16 \mathrm{~mm}$ and $20 \mathrm{x} / 12 \mathrm{~mm}$
Fixed and focusable objectives $£=175 ; \uparrow=200 ; f=250 ; \uparrow=300 ; \mathfrak{f = 4 0 0}$
Motorized focusing option on ENT and DNT versions
Modular to accept Assistant observations system and video imaging system
Long suspension arm option for chair or wall mounted systems
Floor, wall, table and ceiling mount options
Fiber optic illumination 50W LED
Auxiliary Halogen 150W or 250 W Xenon light source
Red reflex slider in PRIMA OPH
Auto cutoff at top parking position

* Depending on the magnification factors of eyepiece, objective and optical focal length of the system.
†Halogen 150W light source recommended for Ophthalmology.

## Medical Diagnostics

| Item |  | Specification |
| :---: | :---: | :---: |
|  |  | Prima ENT |
| - | Binocular tubes | Straight |
| - | Eyepieces | WF $10 \mathrm{x} / 16 \mathrm{~mm}$ with eye guards, optional WF $12.5 \mathrm{x} / 16 \mathrm{~mm}$; WF 16x/16mm; WF20x/12mm |
| - | Apochromatic Magnichanger | 0.4x, 0.6x, 1.0x, 1.6x \& 2.5x |
| - | Objective | $f=250$, manual fine focus, optional: $f=300 \mathrm{~mm}, \mathrm{f}=400 \mathrm{~mm}$; motorized fine focus |
| - | Light source | 50W LED |
| - | Built-in filters | Green \& Yellow |
| - | Vertical movement of arm | 600 mm |
| - | Microscope carriers | $120^{\circ} \mathrm{ENT}$ carrier |
| - | Accessories | Assistant Binocular attachment, iVu OP Beam splitter integrated digital camera Module; Double Beam Splitter; 0-210 inclinable ergo tube |

## Prima DNT

$0-210^{\circ}$ tiltable ergo head
WF $10 \mathrm{x} / 16 \mathrm{~mm}$ with eye guards, optional WF $12.5 \mathrm{x} / 16 \mathrm{~mm}$; WF 16x/16mm; WF20x/12mm
$0.4 x, 0.6 x, 1.0 x, 1.6 x \& 2.5 x$
$f=250$, manual fine focus, optional: $\mathrm{f}=300 \mathrm{~mm}$, manual fine focus $f=300 \mathrm{~mm}, f=400 \mathrm{~mm}$; motorized fine focus

50W LED
Green \& Yellow
600 mm
Dental carrier

Assistant Binocular attachment, iVu OP Beam splitter integrated digital camera Module; Double Beam Splitter

## Prima GN

Binocular $90^{\circ} / 45^{\circ}$ inclined
WF $10 \times / 16 \mathrm{~mm}$ with eye guards, optional WF $12.5 \mathrm{x} / 16 \mathrm{~mm}$; WF 16x/16mm; WF20x/12mm $0.4 x, 0.6 x, 1.0 x, 1.6 x \& 2.5 x$

50W LED
Green
600 mm
Straight carrier

Assistant Binocular attachment, iVu OP Beam splitter integrated digital camera Module; Double Beam Splitter; 0-210 inclinable ergo tube

Description Ophthalmic
